

# Lessons Earned: Equipment - General

The Equipment chapter focuses on solving performance problems in HVAC construction while providing a "How To" approach to avoid problems in the first place. The equipment chapter is a compilation of decades of experiences from dozens of individuals and firms that represent all aspects of the business of designing and installing equipment and figuring out why sometimes equipment doesn't perform as expected. This chapter includes illustrations, drawings and photographs. It will help your business if you buy it, read it, and apply it. **THIS AND ALL CHAPTERS HAVE A VERY RAPID ROI!!!!!!!** Problems with the installation of equipment are covered and a logical thought process designed to achieve project objectives is provided that enables the solution of each problem. These topics are not included in design manuals. You need this chapter if you can't answer the following: What is the most common mistake in installing equipment? What can happen if the equipment vendor is not in the loop during project design? What is the first step to take when it's apparent that equipment is not performing? What can happen when repetitious installation details are not quite right? What is the first thing you should look for when replacing equipment? Why having an exact model number for a new component may not be as smart as you might think? Why careful planning of rigging operations is very important? What the potential ramifications

are when sufficient clearances for maintenance is not provided? When can equipment be used as pipe supports? Why careful utility record keeping and monitoring and project documentation updates are so important? If you use this chapter this you will spend less than you would for two cups of coffee to avoid \$2000.00 or much, much more of headaches and costs!
