

Eniac: The Triumphs and Tragedies of the Worlds First Computer (Science Matters)

ENIAC is the story of John Mauchly and Presper Eckert, the men who built the first digital, electronic computer. Their three-year race to create the legendary ENIAC is a compelling tale of brilliance and misfortune that has never been told before. It was the size of a three-bedroom apartment, weighed 30 tons, and cost nearly half a million dollars to build and \$650 an hour to run. But in 1945, this behemoth was the cutting edge in technology, and a herald of the digital age to come. This little gem of a book tells the story of this machine and the men who built it—as well as the secrecy, controversy, jealousy, and lawsuits that surrounded it—in a compelling real-life techno-thriller.
