

Eternal Progression: What is the meaning of life?

Man has pondered the age old question of the purpose of his existence throughout the ages without finding any definitive answers. Philosophers have postulated theories and argued their hypostasis; does man really exist or are we figments of our imagination locked in dream states. They argue over the question of, do I REALLY exist and, what IS life. Scientists have sought for evidence of why we are here and have concluded that there is none. We just exist by accident. These scientists have argued that the universe was created by "the big bang" that life spontaneously sprang up out of the soup of amino acids, (brought to the earth by comets), which existed on the prehistoric earth billions of years ago. That life "evolved" from single celled bacteria into genders, of all kinds of creatures, through "natural selection" resulting in the evolution of what man is today from monkeys. What is the purpose of our existence? Why are we here? Where did we come from? Is there life after death? These questions are the most important questions of all. The answer to these questions has eluded man. Or have they? Is there an answer to these questions already and we don't know it, understand it, have not discovered it or refused to accept it? This book contains the answers these questions.
