

# Forensic Handwriting Identification: Fundamental Concepts and Principles

Handwriting and hand-printing analysis is applied to many types of investigation: fraud, homicide, suicide, drug trafficking and clandestine labs, sexual offences, threats and extortion, blackmail, arson, bombings, and theft. This text covers the major principles involved in handwriting and hand-printing analysis. Lawyers and investigators will learn about interpreting an examiner's report; the significance of various handwriting opinions; and the influencing factors which must be considered. Naturally, students of document examination can gain much from such a practical, yet rigorously scientific, treatment of the subject.

- \* Shows investigators how to obtain handwriting specimens and evidence\*
- Provides model specimen handwriting forms\*
- Covers best practices for properly identifying, collecting, understanding, and examining evidence
