

Bioterrorism: A Guide for Facility Managers

In the current climate of terrorism, the facility manager is in a more critical position than ever before. Protecting the organizations building and its occupants from chemical, biological, and radiological (CBR) attacks that are designed to disrupt and/or destroy business operation is becoming an increasingly important priority for facility managers using practice management. *Bioterrorism: A Guide for Facility Managers* provides a rationale for systematically identifying and evaluating the key areas of practice management. The book is unique in scope, focusing upon the awareness of terrorist threat. It addresses CBR attacks, as well as other forms of terrorism concerns, such as mailroom security, bomb threats, etc., along with the necessary steps for prevention, how to assess vulnerability, how to improve emergency preparedness, and how to assure optimum response and recovery in the event of an attack. It also presents examples of lessons learned and mistakes to avoid. By focusing on practice management, the text turns the challenges of facility management into opportunities for the facility manager. These opportunities are manifested in an enhanced productivity that aligns itself with ensuring the safety of building employees, occupants and tenants, as well as with business operations.
